Interests

Games (concepting)

I enjoy concepting new games. By playing games and critically looking at them I try to find points that work well or I would do differently myself and improve my own game concepts this way.

Dance & Music

(Ballroom) dancing and music have an important role in my life because they help me relax. Listening to music during work often improves my focus and productivity.

Reading/writing

I enjoy reading not only to relax, but also to learn new things about a wide variety of subjects. This also got me to start writing bit by bit.

Programming

It feels right to build a program by putting words in a certain logical context and making sure it's easy to use and understand.

Personal presentation

Some of my strong points are:

- 1) concretizing rules and appointments (something I have done many times during school projects);
- 2) communicating in a clear and unambiguous manner, and;
- 3) keeping overview and communicating that to others.

Experiences, other games and the world around us contain inspiration I try to incorporate into game concepts whenever they might improve it. By using experience, disciplines and skills gained from previous jobs and (school)projects as best I can, I attempt to lift these concepts to higher levels.
